Professional Summary

Generative AI Developer specializing in building RAG systems and event-driven automation workflows. Experienced in developing real-time AI applications using modern tools like LangChain and n8n, with a strong foundation in full-stack development. Proven ability to design practical, scalable AI solutions backed by hands-on project experience and real-world problem solving.

Technical Skills

- **Languages:** Python, JavaScript, Git/GitHub
- **AI / Generative AI:** Retrieval Augmented Generation, Agentic Workflows, Prompt Engineering, AutoGen, NLP Pipelines
- **Frameworks & Libraries:** LangChain, Hugging Face, ChromaDB, Cohere/OpenAI Embeddings, REST APIs
- **Automation & Orchestration:** n8n (MCP workflows), Event-driven pipelines, multi-agent coordination
- **Core Concepts:** Vector Embeddings, Retrieval Optimization, Contextual Memory Handling
- **Frontend & Interface Development:** Chat interface design, Real-time rendering, Streamlit UI, Lovable (AI-assisted UI)
- **Web Development:** MongoDB, Express.js, React, Node.js

Experience

Generative AI Trainee (Industrial Training + Project)

Sept 2025 – Feb 2026

QuantumCrafter Studio Pvt. Ltd.

- Developed hands on expertise in Large Language Models (LLMs), RAG systems, and advanced prompt engineering for real world AI applications.
- Built a production grade RAG based PDF chatbot leveraging vector retrieval for accurate, context-aware document question-answering.
- Engineered vector database pipelines and semantic retrieval systems using ChromaDB for contextual AI application deployment.
- Applied embedding models to improve retrieval precision and reduce response latency in free tier AI environments.

Full Stack Developer (MERN) – Training + Project

Jan 2025 – May 2025

SkillStone (Grazitti Interactive)

- Engineered a real time chat application using MERN stack with WebSocket based communication
- Implemented user interaction features and optimized application responsiveness
- Strengthened understanding of scalable backend systems and real-time architectures

Projects

RAG-based PDF Chatbot ([Github PDF Chatbot](#))

- Designed and deployed a chatbot that answers natural language queries from PDF documents using Retrieval Augmented Generation (RAG). Optimized latency and token usage in free-tier AI services.
- Optimized token usage and inference latency to operate efficiently within free tier AI API constraints.
- Built a ChatGPT-style conversational UI in Streamlit for an intuitive, polished user experience.
- **Tech Stack:** Python, LangChain, ChromaDB, Cohere Embeddings, Streamlit

AI Stock Market Signal Automation ([Github AI Stock Market Signal](#))

- Architected an event-driven automation pipeline using n8n to generate real-time stock trading signals.
- Handled **API integration** with external financial data sources to fetch live market data and trigger conditional workflows
- Designed decision-based logic for signal generation and automated output delivery
- **Tech Stack:** n8n, REST APIs, Lovable (Frontend), Conditional Workflow Logic

Education

Chandigarh Engineering College

Bachelor of Technology (ECE)

Chandigarh

2021– 2025

St Soldier Int. Convent School

Physics, Maths and Chemistry

Mohali

2019- 2021

Certifications

- [Generative AI | IBM SkillsBuild | 2026](#)
- [AI Engineer Certificate | OneRoadmap | 2026](#)
